

SUSHANTH ALLURKAR

Software Developer | Application Security & AI

sushanth9524@gmail.com | (+91) 6303741224

GitHub: github.com/ALLURKARSUSHANTH | LinkedIn: /Sushanth Allurkar

PROFESSIONAL SUMMARY

Detail-oriented software developer with hands-on experience building AI-driven security tooling and full-stack web applications. Skilled in Python, JavaScript/React, and REST API design, with practical exposure to Application Security (AppSec) workflows, SAST tooling, and Large Language Model (LLM) integration. Proven ability to translate manual security operations into automated, agentic solutions that reduce analyst toil while writing clean, maintainable, production-grade code.

TECHNICAL SKILLS

Programming	Python, Java, Kotlin, JavaScript, C, C++
Web & Frameworks	React.js, Node.js, FastAPI, REST APIs, Vite, Three.js, Material UI, HTML, CSS
AI / ML	LLM integration (Databricks Foundation Models, Claude), Retrieval-Augmented Generation (RAG), vector embeddings (ChromaDB), prompt engineering
Databases & Backend	MySQL, MongoDB, Firebase, SQLite
Tooling & DevOps	Git, GitHub, Postman, Selenium, Server-Sent Events (SSE) streaming
Soft Skills	Problem-solving, debugging, cross-team collaboration, adaptability, communication

EXPERIENCE

Cyber Security Intern — Application Security | Stellantis

Project: ERIKA — Where AI meets Application Security

Built AI-based use cases to automate manual AppSec tasks via a full-stack (FastAPI + React) platform spanning RAG assistance, SAST automation, and security analytics.

- RAG Assistant: Citation-backed Q&A over security policies using ChromaDB embeddings and a Databricks LLM (Claude), replacing manual policy lookups.
- SAST Automation: Automated Checkmarx One access management (user/group, roles, project assignments) via OAuth APIs and Selenium login automation.
- Remediation Pipeline: Agentic, SSE-streamed workflow for scan retrieval, repo sync, vulnerability indexing, and AI remediation guidance with severity ranking.
- Security Analytics: Ingestion of CSV/XLSX vulnerability data with normalization, SQLite persistence, KPI dashboards, and Power BI exports.
- AI Summaries: App-level risk summaries with an approval/rejection governance workflow for AppSec leads.
- Voice & Avatar: Edge TTS speech with a 3D Three.js avatar for an interactive assistant UX.

Tech stack: Python, FastAPI, React, Vite, Three.js, ChromaDB, Databricks LLM, Checkmarx One API, Selenium, SQLite, SSE, Edge TTS

PROJECTS

Open-Devs — Social Platform for Developers

React.js, Material UI, Node.js, MongoDB

- Built a real-time developer collaboration platform with integrated open-source project discovery.
- Created responsive, interactive front-end UI with React.js and Material UI.
- Developed REST APIs and backend logic with Node.js and MongoDB.
- Improved scalability and performance using modular components.
- GitHub: github.com/ALLURKARSUSHANTH/Open-Devs

MyPass — Digital Bus Pass Application

Kotlin, Firebase

- Built a mobile-first solution to streamline transportation pass management.
- Collaborated on UI design and responsive layout implementation.
- Focused on performance and usability with clean, structured code.
- GitHub: github.com/ALLURKARSUSHANTH/MyPass

EDUCATION

- B.E. (Information Technology) — Chaitanya Bharathi Institute of Technology | 2023–2026 | CGPA: 7.62
- Diploma, Computer Engineering — Ellenki College of Engineering and Technology | 2020–2023 | CGPA: 7.44

CERTIFICATIONS

- **Google Android Developers Virtual Internship — Eduskills Foundation**
Kotlin & Jetpack Compose for Android development; Firebase real-time database integration.
- **Google AI/ML Virtual Internship — Eduskills Foundation**
Hands-on experience with TensorFlow, computer vision, and NLP.
- **MERN Stack Industrial Training — CodeSprint**
MongoDB, Express.js, React.js, and Node.js.
